

Job Title: Java Web Developer (permanent)

About us:

Intelligent Addressing Limited (IA) provides private sector skills and consulting services to the public and private sectors, and manages the National Land and Property Gazetteer (NLPG) and the National Street Gazetteer (NSG). IA provides custodianship for the NLPG and the NSG as part of the Mapping Services Agreement (MSA) with local government in England and Wales.

Main tasks:

- Development of web-based, multi-threaded Java applications and services in all stages of development (research, prototype, iterative/modular development and ongoing maintenance/enhancements)
- Testing (including TDD), adherence to software development standards and the preparation of technical documentation
- Team development and also independently managed work

The candidate should have three years of professional experience developing web applications. The candidate will work with technical and business users to gather requirements and develop solutions while being responsible for planning and estimating project deliveries. Time will be allocated to the research and development of new functionality and technical frameworks.

Methodologies: TDD as well as Agile, Scrum or xp

Technologies:

Core: Java, Spring, Hibernate, POJO, Tomcat, JSP, JavaScript, CSS, AJAX, MySQL
Preferred: ExtJS, J2EE, Hudson, Maven, Ant, JUnit, SVN, REST, SOAP, Glassfish
Desirable: GIS, OpenLayers, GeoServer, Mapfish, GML, GDAL, WMS,
PostgreSQL/PostGIS

Attributes and Experience:

Suitable candidates will have a good combination of technical education and knowledge. We are looking for a candidate with strong business communication skills, an enthusiastic but professional attitude and an interest in web mapping and public sector geospatial information.
